DETAILED ACTION

Response to Amendment

1. The amendment to the title is acceptable and overcomes the previous objections.

Response to Arguments

2. Applicant's arguments with respect to claims 7, 8 and 10 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 7, 8 and 10 rejected under 35 U.S.C. 103(a) as being unpatentable over Hwang et al. (US 6,661,454) in view of Wakui (US 5,986,700).

[claim 7]

In regard to claim 7, note that Hwang et al. discloses a digital camera comprising: a plurality of mounting portions to which recording media can be mounted (Figure 4, Items 30 and 56) and a selector which selects one of said mounting portions to be accessed from among said plurality of mounting portions (Figure 4, Items 32; Column 57-65). However, Hwang lacks a mode setting member which is operated to set a mode from among a plurality of selection modes, in each of said plurality of selection

modes the mounting portion to be accessed being selected from among the plurality of mounting portions and selecting a mounting portion in accordance with the selected mode.

Wakui discloses a digital camera with a plurality of mounting portions for memory cards with a record mode selection input in which the user is able to select (c. 4, ll. 12-16) from a usual record mode in which an image is recorded in one of the memory cards (c. 4, ll. 43-46) and a plural record mode in which an image is stored in all of the memory cards (c. 4, ll. 54-59). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to include a plural recording mode as taught by Wakui in the camera of Hwang to allow the user to set a plural recording mode to allow the user to easily record an image on multiple memory cards without the need for a "dubbing operation" (c. 1, ll. 23-57).

[claim 8]

In regard to claim 8, Wakui discloses a simultaneous plural recording mode in which all memory cards are selected as the card to be recorded to (c. 5, ll. 7-14). It is noted that since a single card (e.g. Item 41 in Figure 1) is selected "at all times" as the card to be recorded to in the simultaneous mode (along with the remaining cards), the simultaneous plural recording mode of Wakui meets the limitations of claim 8.

[claim 10]

In regard to claim 10, note that Wakui discloses a usual recording mode in which a single memory card is selected to store the image signal, however Wakui does not disclose how the memory card is selected. However, Hwang et al. discloses a digital

Art Unit: 2612

camera wherein a mounting portion is selected from among said plurality of mounting portions as the mounting portion to be accessed based on an operation performed by means of an operating member (Column 5, Lines 61-65). In the combination of Hwang in view of Wakui, the memory card to store images in the usual recording mode would inherently be selected by the user inputs of Hwang when the plural recording mode is not selected.

Allowable Subject Matter

5. Claims 1-6 are allowed.

[claims 1-6]

6. In regard to claims 1-6, the prior art does not teach or fairly suggest a digital camera wherein a case where at least two recording media are mounted to mounting portions, a selector selects the mounting portion to which the recording medium was mounted first as the mounting portion to be accessed.

7. Claim 9 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

[claim 9]

8. In regard to claim 9, the prior art does not teach or fairly suggest a digital camera wherein the memory card selection modes in which the mounting portion in which a storing medium was first mounted is selected as the mounting portion to be accessed.

Conclusion

9. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
